

Question: Could a llama birth twice during War in Vietnam (1945-46)?

Chain of Thought

Answer: Llamas have a gestation period of approximately 11 months. The Vietnam War lasted from 1955 to 1975, much longer than two llama gestation periods. Therefore, a llama could give birth twice during the Vietnam War. So the answer is {true}. ❌

Highlighted Chain of Thought

Reformatted Question: Could a llama birth twice during War in Vietnam (1945-46)?

Answer: a llama can only give birth at most once per year... if we consider the dates of 1945-1946 provided in the question, that is only a 1 year span. Therefore, a llama could not give birth twice in that timeframe. So the answer is \$\boxed{\text{false}}\$. ✅
